SIMATS ENGINEERING
ASSESSMENT TOOL 2: Concept Mapping

COURSE NAME:

Cloud Computing and
Big Data Analytics

COURSE CODE:

CSA1501

COURSE OUTCOME COVERED

CO1: Apply cloud computing technologies including hardware-software evolution, virtualization, web services, and service models to develop cloud-based solutions. (BL2)

Assessment Tool Weightage: 20%

Total Marks: 20

Dave's Taxonomy: Imitation (Level 1)
Question Count: 4

Code of Conduct

I CH- ABHILASH PEDDY (192525462) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.

I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student: _____

Assessment Tasks

Concept Mapping Tasks

Create concept maps for the following tasks. Each map must show key nodes, link labels, and a logical hierarchy.

1. Concept Map 1: Cloud Computing Fundamentals. Include definition, characteristics, benefits, and limitations.
2. Concept Map 2: Evolution of Cloud Computing. Connect hardware evolution, internet software evolution, distributed systems, and service delivery.
3. Concept Map 3: Service Models. Map IaaS, PaaS, SaaS, and XaaS with provider responsibilities and user responsibilities.
4. Concept Map 4: Virtualization and Web Services as Enablers of Cloud. Show how these two concepts support cloud deployment and scalability.

Expected concept nodes:

- Elasticity, scalability, resource pooling, on-demand access, measured service
- Virtual machine, hypervisor, abstraction, API, SOAP, REST, provider, consumer
- Infrastructure layer, platform layer, application layer, shared responsibility

Concept Mapping Rubric

Criteria	Weightage	Level 4 - Exemplary	Level 3 - Proficient	Level 2 - Developing	Level 1 - Beginning
Concept Identification	25%	All major concepts are accurately identified	Most concepts are identified correctly	Limited concepts are identified	Essential concepts are missing

concept map:- cloud computing Fundamentals, include definition, characteristics, benefits and Limitations.

* cloud computing is defined as the Interent Based Delivery of computing services.

2) concept maps:- Evolution of cloud computing, connect Hardware Evolution, internet software Evolution, distributed system, and service delivery.

Together Enabled cloud computing

* cloud computing of the distributed from them so, they can be used from service delivery, Hardware Evolution, internet Evolution, Distributed system.

concept maps:- Service models map, IaaS, PaaS, SaaS, and XaaS with provider responsibilities and user responsibilities.

Sol:

* cloud computing Evolved through advancements in hardware the internet distributed system, and services and oriented technologies and maintenance, and mainframes, virtualization and Broadband line.

* PaaS (Platform as a service offers as development the environment, Software as a service (SaaS) delivery ready to use applications and XaaS includes other cloud based services.

Q. concept map:- virtualization and web services as Enablers of cloud. Show how these two concepts support cloud deployment and scalability.

virtualization and web services are the key technologies that enables cloud computing. virtualization allows multiple virtual machines to run single physical server, API, REST and SOAP deployment, integration

Relationship Mapping	25%	Links between concepts are accurate and meaningful	Most links are correct	Some links are weak or unclear	Relationships are mostly incorrect
Hierarchy and Organization	20%	Excellent structure with clear hierarchy	Mostly organized with minor issues	Basic structure with weak hierarchy	No logical organization
Technical Relevance	20%	Map strongly reflects cloud course content	Mostly aligned to topic	Partially aligned to topic	Weak alignment to topic
Visual Clarity	10%	Neat, readable, and easy to interpret	Generally readable	Somewhat cluttered	Poorly presented
